EDUCATION

The Hong Kong University of Science and Technology *September 2022 - June 2026*

BEng in Electronic and Computer Engineering, Minor in Information Technology

- Second Class Honours, Division I

WORK EXPERIENCE

Mednnect Limited – *AIoT Engineer (Software)* Sep *2026 - Now*

- Led a 4-member team to design and deploy innovative **AIoT** hardware features.
- Integrated **mmWave technology** to enable precise, real-time pet vital sign calculation and IoT connectivity.
- Solely designing **AIoT B2C** and **B2B** devices that capture different data, photos and audio
- Contributed to mobile/web app development for real-time AI analysis and user interaction
- Utilized **MATLAB** to analyze raw vital sign signals obtained from mmWave sensors.

Mednnect Limited – *AI Engineering Intern* *July 2026 - Aug 2026*

- Led a 5-member team to design and deploy innovative **AIoT** hardware features.
- Independently developed a full-stack web application using **TypeScript** and **JavaScript** to visualize real-time device data via an interactive dashboard.
- Optimized backend services in **C++** and **TypeScript**, successfully reducing API response times by **20%**.
- Utilized a robust tech stack including **SQLite, RESTful APIs,** and **Insomnia** for efficient data management and API testing

Nexrehabs Limited – *AI Robotics Intern* *July 2025 - Sep 2025*

- Developed an **ESP32-S3** module in **C** using **HMVCAM** to enable real-time image capture and seamless data processing
- Established wireless data transmission pipelines to stream captured images and data packets instantly to a **React web server**.
- Soley architected an **end-to-end IoT** system that processes AI analysis to deliver immediate, real-time feedback to users.
- Utilized core embedded and testing tools, including **Arduino IDE** for firmware development and **Insomnia** for API testing and interface debugging.

SELF-PROJECT EXPERIENCE

Game Developer | Global Game Jam Hong Kong (GGJHK) 2026

- Collaborated with a team of 4 to design and develop a mask-themed game using C# and Unity within intense 48 hours, covering the full process from concept and design to a finished playable project.

Gathering App - Social Platform

- Developing a cross-platform mobile application/platform that helps users meet new friends through face- to-face gatherings
- Built the mobile frontend with React Native and managed the backend/database with Supabase

Intro World - Personal Website

- Developed an interactive Minecraft-styled website where a stick-man guide walks visitors to chests that open onto my experience, projects, skills and contact details
- Built the voxel world, character and chest interface in real time with Three.js and Vite, making every texture in code, and deployed it on GitHub Pages

SKILLS

- **Programming Language:** Python, C, C++, C#, JavaScript, TypeScript, MATLAB
- **Frameworks & Libraries:** PyTorch, TensorFlow, Node.js, Socket.io, Express.js, React Native, Expo, RESTful APIs, Unity, Three.js, Chart.js, Google Analytics, Facebook Pixel
- **Database:** MySQL, PostgreSQL, SQLite, Supabase, Knex.js
- **Infrastructure:** Git, Docker, Insomnia
- **Embedded Systems:** STM32 (CubeIDE), ESP32 (ESP IDF), Arduino (Arduino IDE), Raspberry Pi
- **Languages:** Cantonese (Native), English (Fluent), Mandarin (Fluent)
